

Maintaining free software without selling out

—

Maxime Besson

My ethics

- Free software is the better way to do software
- But to realize its potential it needs to be
 - **Useful**: features
 - **Adaptable**: flexibility
 - **Easy**: to use, and get started with

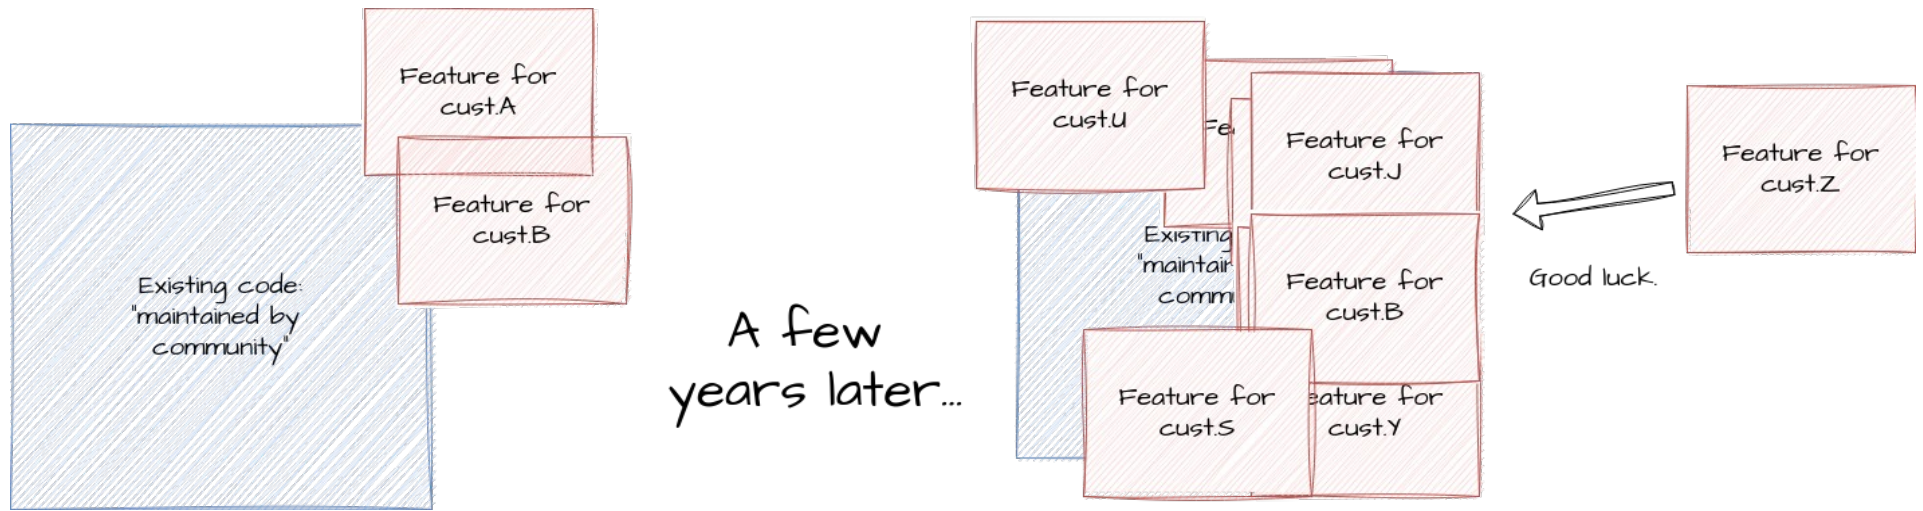

My business model

- LemonLDAP::NG developer
 - ~ a highly configurable login form running on a dedicated server
 - Funding mostly comes from support contracts
- Customers pay for:
 - Bug fix => always upstreamed
 - Features => usually upstreamed
 - Consulting, training, documentation => nothing to upstream, or is there?

If development matched the money flow

Consequences if we worked like this

- Too specialized
 - Oracle support but no SQLite support
- Adding features becomes hard
 - Spaghetti code, technical debt
- Hard to install
 - Too many requirements (external DB, Redis, Elasticsearch),
- Only corporate users with support contracts can use our software
 - We have sold out!

Solution : grasping for
opportunities

The guiding principle

- Every customer request must be an opportunity to make the software better for everyone
- I try to do things for everyone, *then* for the customer
 - Remember : customers change their mind

New features

Every feature has a generic component

Anatomy of a new (enterprise) feature:
sending suspicious events
to a in-house alert server

Generic:
React to events
Gather event context

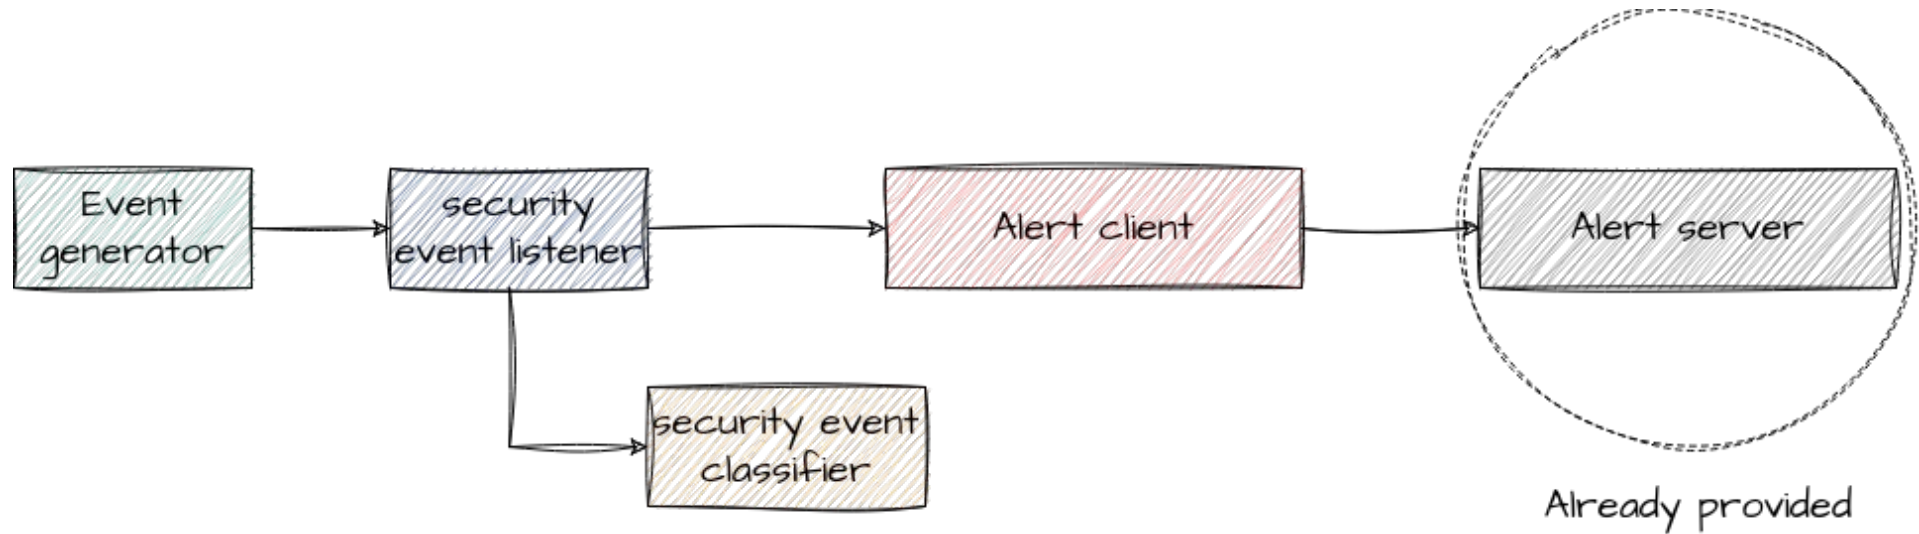

Grey area:
Classify events
Format events as JSON

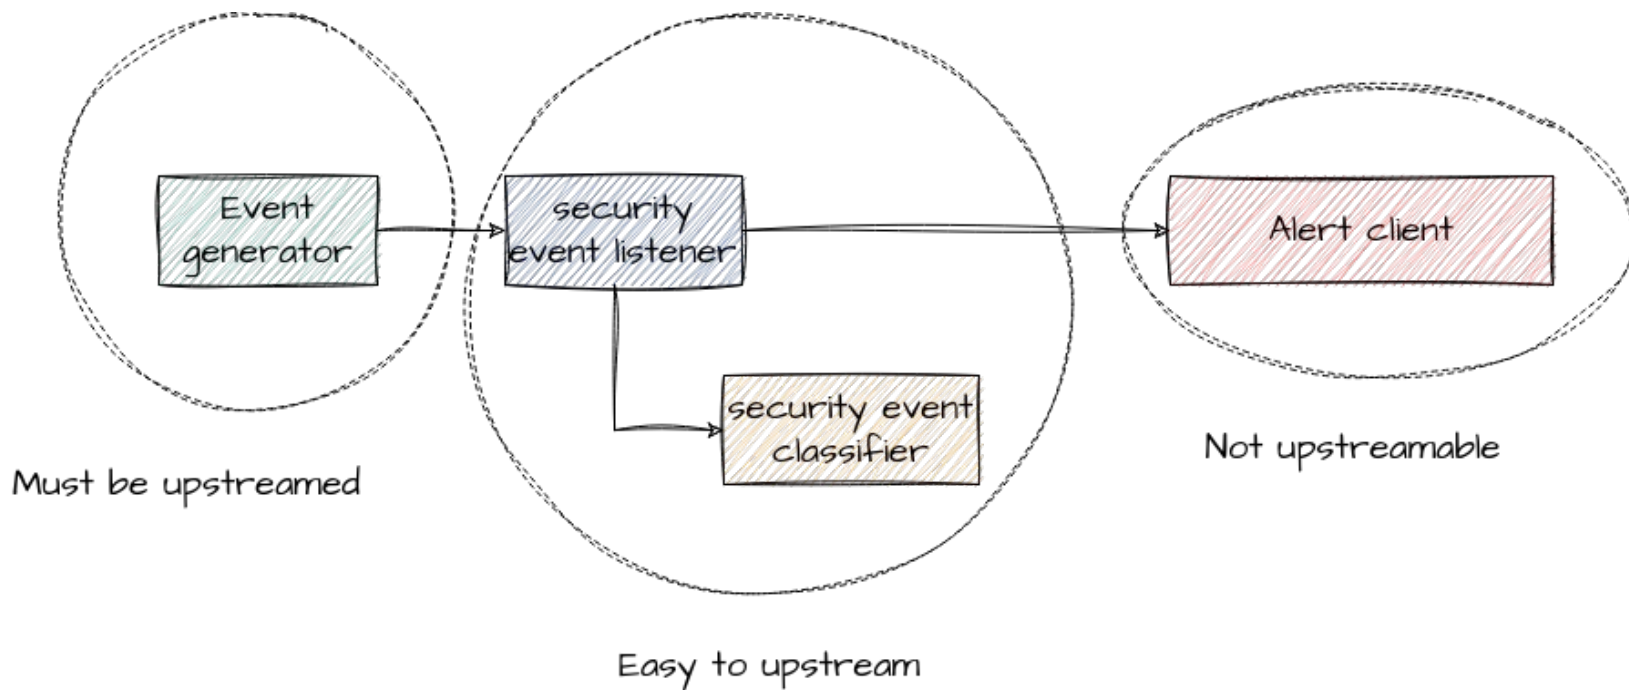

Specific:
Alert client
Configuration
Business rules

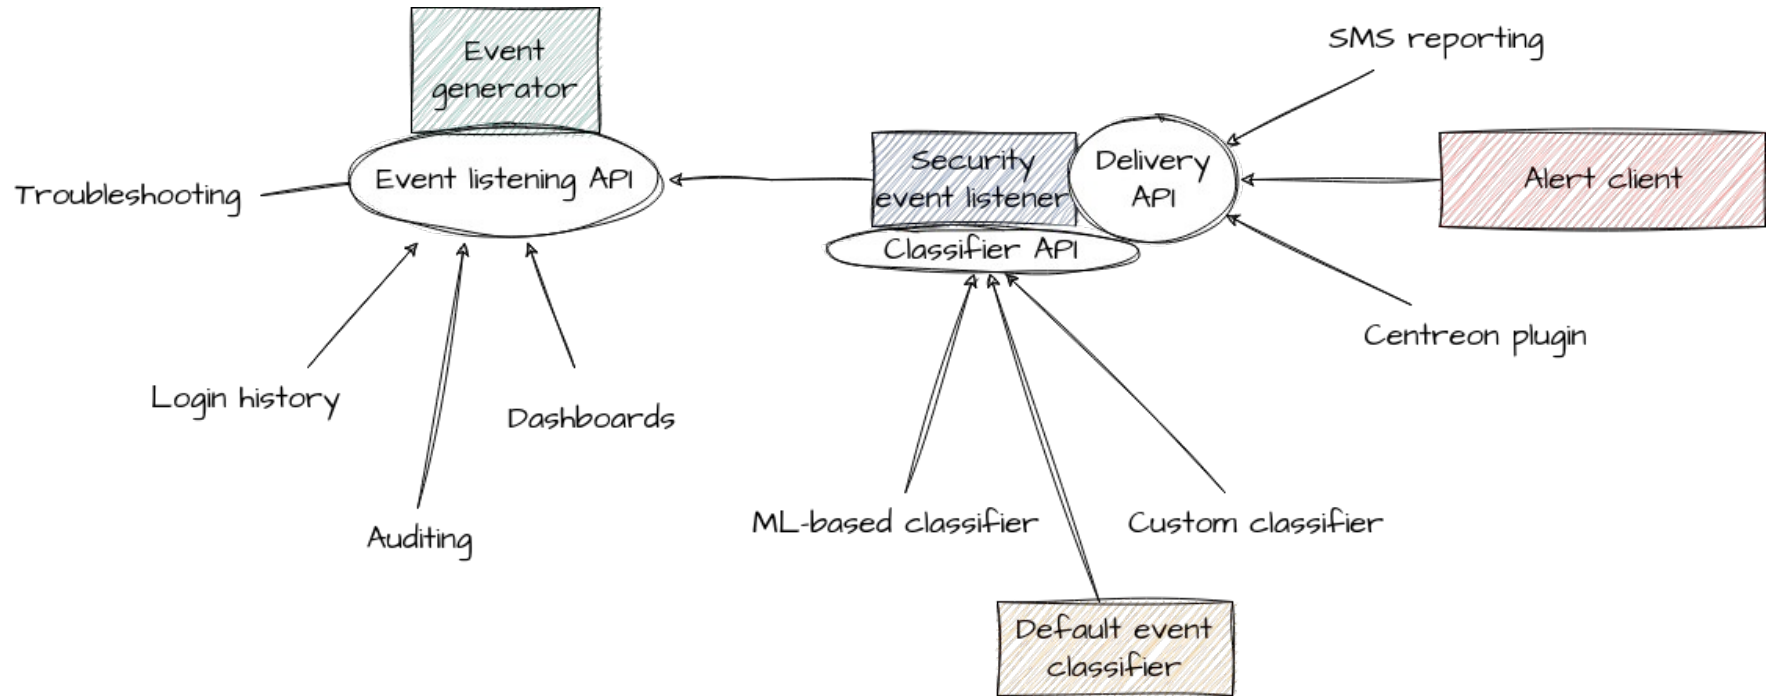

Components

Maintenance lifecycle

Opportunities for extension

More opportunities

Unit tests are always good

- When fixing a bug
 - Prevent bug from reappearing
 - Catch related bugs
 - Increase coverage / enables refactoring
- When adding new features
 - Prevent bugs from happening

Dependencies: less is more

- Managing deps < removing deps
 - Simplifies installation / maintenance
 - Improves security
 - Improves OS compatibility

Using time wisely

- Writing huge docs < simplify the install process
 - Docs are outdated on day one
 - Use distribution packages (RPM, deb)
- Level 2 support < improve default behavior
 - Saves time for everyone, not just new users

Conclusion

Conclusion

- Investing time wisely makes a big difference
 - Spending more now to spend less later
 - Customers prefer when the prices go down
- Today's freeloaders are tomorrow's sponsors
 - Only pleasing current customers is sawing off our own branch

Thanks for listening
